

TABLE 1. A SUMMARY(including footnotes) OF ATLANTIC MARINE MAMMAL STOCK ASSESSMENT REPORTS FOR STOCKS OF MARINE MAMMALS UNDER NMFS AUTHORITY THAT OCCUPY WATERS UNDER USA JURISDICTION.

Total Annual S.I. (serious injury) and Mortality and Annual Fisheries S.I and Mortality are mean annual figures for the period ~~2003~~2004-2007~~2008~~. The “SAR revised” column indicates ~~2009-2010~~ stock assessment reports that have been revised relative to the ~~2008-2009~~ reports (Y=yes, N=no). If abundance, mortality, PBR or status have been revised, they are indicated with the letters “a”, “m”, “p” and “status” respectively. For those species not updated in this edition, the year of last revision is indicated. Unk = unknown and undet=undetermined (PBR for species with outdated abundance estimates is considered "undetermined").

- a. The R goven for right whales is the observed R. The total estimated human-caused mortality and serious injury to right whales is estimated at ~~3.22.8~~ per year (USA waters, 2.2;

- Canadian waters, ~~4.00~~.6). This is derived from two components: 1) non-observed fishery entanglement records at 0.8 per year (USA waters, 0.86; Canadian waters, 0.2), and 2) ship strike records at ~~2.2~~0 per year (USA waters, 1.6; Canadian waters, 0.64).
- b. The total estimated human-caused mortality and serious injury to the Gulf of Maine humpback whale stock is estimated as 4.64 per year (USA waters, 4.04; Canadian waters, 0.42). This average is derived from two components: 1) incidental fishery interaction records ~~2.83~~0 (USA waters, 2.48; Canadian waters, 0.42); 2) records of vessel collisions, 1.6 (USA waters, 1.6; Canadian waters, 0).
 - c. This is based on a review of NMFS records from ~~2003~~2004-20072008, that yielded an average of ~~2.83~~2 human caused mortality; ~~1.62~~0 ship strikes (1.24 in USA waters and 0.46 in Canadian waters) and 1.2 fishery interactions/entanglements (0.42 in Canadian waters and ~~0.81~~0 in USA waters).
 - d. During ~~2003~~2004-20087, the USA total annual estimated average human-caused mortality is ~~23.42~~8 minke whales per year. This is derived from ~~three~~threefour components: ~~0.2~~6 minke whales per year from USA fisheries using observer data (one minke whale bycatch was observed in 2004), ~~1.8~~02 minke whales per year from USA fisheries using strandings and entanglement data, ~~1.42~~ minke whales per year from Canadian fisheries using strandings and entanglement data, and 0.4 minke whales per year from ship strikes.
 - e. This estimate may include both the dwarf and pygmy sperm whales.
 - f. This estimate includes Cuvier's beaked whales and undifferentiated *Mesoplodon* spp. beaked whales.
 - g. ~~This While abundance estimates have been attributed to each stock, the bycatch~~ estimate ~~may~~includes both long-finned and short-finned pilot whales.
 - h. Estimates may include sightings of the coastal form.
 - i. Several seasonal management units have been defined for the coastal bottlenose dolphin. Each has a unique abundance estimate, PBR and mortality estimate provided in the Western North Atlantic coastal bottlenose dolphin species section of the text.
 - j. The total annual estimated average human-caused mortality is ~~817~~940 (CV=~~.4216~~) harbor porpoises per year. This is derived from three components: ~~807~~889 harbor porpoise per year (CV=0.4216) from USA fisheries using observer and MMAP data, ~~2.45~~ per year (unknown CV) from Canadian fisheries using observer data, and ~~7.56~~ per year from USA unknown fisheries using strandings data.
 - k. The total estimated human caused annual mortality and serious injury to harp seals was ~~433,221~~500,270. Estimated annual human caused mortality in US waters) ~~444~~195 harp seals CV=0.20) from the observed US fisheries. The remaining mortality is derived from five components: 1) ~~2003~~2004-2007-2008 average catches of Northwest Atlantic harp seals by Canada, ~~341,881~~297,452; 2) 20043-2007-2008 average Greenland Catch, ~~78,137~~83,583; 3) 1,000 average catches in the Canadian Arctic; 4) ~~120,643~~290 average bycatches in the Newfoundland lumpfish fishery; and 5) ~~403,215~~105,750 average struck and lost animals.
 - l. This is derived from three components: 1) 5,173 from 2001-2005 (2001 = 3,960; 2002 = 7,341; 2003 = 5,446, 2004=5,270; and 2005=3,846) average catches of Northwest Atlantic population of hooded seals by Canada and Greenland; 2) 25 hooded seals (CV=0.82) from the observed U.S. fisheries; and 3) one hooded seal from average 2001-2005 stranding mortalities resulting from non-fishery human interactions.
 - m. This estimate includes Gervais' beaked whales and Blainville's beaked whales.
 - n. This estimate includes all *Globicephala* sp., though it is presumed that only short-finned pilot whales are present in the Gulf of Mexico.
 - o. ~~Strategic status determination for the current year will be completed when fishery bycatch estimates are finalized. Status reported is that of the most recently published stock assessment report.~~
